WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Pan 490 x 430 x 25 deep from 1 mm sheet: blank 540 x 480 with the centre cut out to leave an 8 mm rim (inner 474 x 414). Fold the four sides up 25 at the 490 x 430 lines; the rim becomes an inward bottom lip. Notch and rivet the corners; seal them with silicone.
Floor: seven aluminium flat bars 6 x 1.5, 428 long, on edge at 60 pitch, resting on the lip; a PTFE-coated glass-fibre mesh (about 1.8 mm aperture), 488 x 428, on top. The sorbent holds it down.
Coat the pan inside and the bars with black PTFE at a coating shop; leave the pan underside bare.
Absorber plate: 1 mm perforated aluminium, 3 mm holes at 6 mm staggered pitch, 484 x 424, two 25 mm finger holes 25 in from the short ends; black PTFE both faces. It rests on the levelled bed.
EPDM gasket tape under the lip, all round.
Fit: the lip sits on the baffle gasket over its opening; 13 to 23 mm from the walls, 14 mm between trays.
Check: the floor sags less than 3 mm with 1 kg spread on it.
