WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Pan 490 x 430 x 25 deep from 1 mm sheet: blank 540 x 480 with the centre cut out to leave an 8 mm rim (inner 474 x 414). Fold the four sides up 25 at the 490 x 430 lines; the rim becomes an inward bottom lip. Notch and rivet the corners; seal them with silicone.

Floor: 1 mm perforated aluminium (about 50 % open), 488 x 428, laid on the lip, with a stainless woven mesh (1 mm aperture) of the same size on top. The sorbent holds them down.

Paint the inside and the top edge matt black (high-temperature); leave the underside bare.

EPDM gasket tape under the lip, all round.

Fit: the lip sits on the baffle gasket over its opening; 13 to 23 mm from the walls, 14 mm between trays.

Check: the floor sags less than 3 mm with 1 kg spread on it.
